

Dear Hiring Manager,

I am writing to express my interest in a Frontend Software Engineer role. I am a frontend-focused software engineer with commercial experience at Sky and Lloyds Banking Group, specialising in React, TypeScript, JavaScript, Next.js, and accessible, responsive web applications.

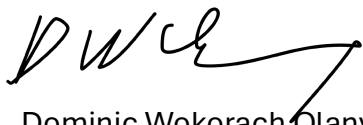

In my recent role as a Software Engineer Intern at Sky, I developed responsive React and TypeScript components supporting catalogue, pricing, and billing workflows across internal business services. I also integrated REST APIs with AWS-hosted microservices, contributed to cloud-native applications using Docker, Kubernetes, and CI/CD pipelines, and supported delivery through Agile ceremonies, code reviews, testing, and incremental releases.

Before this, I worked at Lloyds Banking Group across frontend, innovation, architecture, and digital transformation teams. As a Senior Frontend Developer, I delivered WCAG 2.1 AA-compliant user interfaces, developed reusable shared design-system components, and improved frontend maintainability and performance through scalable UI architecture. My wider experience also includes Python automation, UX prototyping, Neo4j graph database initiatives, and proof-of-concept AI search solutions.

I bring a strong combination of hands-on frontend engineering, accessibility awareness, collaborative Agile delivery, and a practical understanding of APIs, cloud-native environments, testing, and performance optimisation. I am particularly motivated by roles where I can build high-quality user interfaces, contribute to reusable component systems, and work closely with product, design, and engineering teams to deliver reliable software.

I would welcome the opportunity to discuss how my experience and technical skills could contribute to your team. Thank you for considering my application.

Yours sincerely,
